

## CASE STUDY:

# SOLARFIX SOLAR PANEL MESH + CRITTER CLIP SYSTEM

POWERSONIC  
ELECTRONIC

## THE CHALLENGE

Power Sonic Ltd, a solar installation company that offers bird proofing as an additional service, was looking for a more efficient and reliable solution for protecting solar arrays from bird and pest intrusion. Their team had previously used standard bird guard products but found them time-consuming to fit and less reliable over time. A key goal was to reduce install time without compromising on durability or appearance.

## THE RESULT

The system was installed smoothly and quickly, delivering immediate protection from birds and wildlife without impacting the panel structure and preserving solar panel warranties. Mark Alison, Power Sonic's Managing Director, noted, "Keeping pesky birds, squirrels and other wildlife from under solar panels is always a battle. But these new speed clips from PestFix are a level up. The newer style clips have the strengthening wings on them. We won't use anything else. Well worth checking out."

## THE SOLUTION

PestFix supplied Power Sonic with the SolarFix mesh and Critter Clip system, providing a faster and more secure method of pest prevention for solar panels. The black PVC-coated mesh offered long-term durability and a cleaner finish, while the redesigned Critter Clips, with integrated strengthening "legs", ensured a solid grip without the need for drilling or adhesives.

- Compared to the previous system, SolarFix delivered:
- Reduced installation time
- Improved aesthetics with mesh that blends into the panel frame
- Enhanced stability through upgraded clip design
